

# LÄHE COLOR CHART

This color chart presents the standard finish options available for our greenhouses. Each tone has been selected to complement natural surroundings and maintain long-lasting appearance. Please note that color perception may vary depending on screen calibration and lighting. For the most accurate selection, we recommend reviewing a physical sample before finalizing your order.

## 1. Uncoated Thermowood

Thermowood has a naturally rich brown color that develops during the heat-treatment process. This warm, earthy tone gives the material a distinctive appearance.

## 2. Oiled finish

We use Osmo natural wood oils and offer three standard color tones for finishing. However, additional shades and custom tones are available upon request, allowing the final look to be tailored to your project.

Oak 706

Walnut 707

Palisander 727

### 3. Painted finish

We use Tikkurila paint for finishing, as it provides reliable coverage and long-lasting protection. A wide range of color options is available, allowing you to choose a tone that best matches your design vision or architectural style.
